Bob,

The list of “chemicals of potential concern” (i.e., contaminants) is in Table 1-2 above from the Remedial Investigation Report. The ones potentially impacting human health are shown as “HH” in the table. FYI, I’ve also included other tables showing various sampling results - the northern impoundments are Area 3 in the tables.

Please let me know if you have any questions on this.

Regards,

Gary Miller

9671295

Gary,

Can you send me the list of contaminants found in the northern impoundments.

Thanks.. Bob

**Subject:** Draft Water Sampling Bid Pricing Sheet

Gary,

As we work our way through the draft bid specs for the proposed residential well sampling/testing plan one question that we haven't entirely answered is what to look for given the results and health evaluation of the April, 2013 sampling event and the community health concerns. I'll also ask DSHS and our county health department to look at the list as well but I wanted to get your input/guidance first.

In the attached spreadsheets we list the primary and secondary (yellow highlighted) VOC's, SVOC's and other drinking water standards that we propose to sample for. We also indicate what you all tested for in 2013. I would like to pare the list down but given the community health concerns about their drinking water we want to be as complete as possible. The results will also be a driver as to whether or not a public water supply should be considered.

Thanks for your help! Bob
